

CLIMATE CHANGE IN NORTH CAROLINA

Webinar Series

Join us for this webinar series to learn more about climate change in North Carolina. The series will begin with an overview of the most up-to-date scientific information about climate change from the North Carolina Climate Science Report (NCCSR), as well as a review of activities happening at the state level. Subsequent webinars will take a deeper dive into individual topics to explore the science and actions taking place across the state. This series is hosted by NC State University's State Climate Office of North Carolina (SCONC) and the North Carolina Institute for Climate Studies (NCICS).

The SCONC is a public service center at NC State University dedicated to exploring climate-environment interactions in the state, with mission areas in extension, education, research, and monitoring. NC State University's NCICS led the development of the NCCSR. NCICS is a unique center of excellence showcasing a partnership between universities, the private sector, non-profit organizations, community groups, and the federal government. As an inter-institutional research institute of the University of North Carolina system, NCICS facilitates climate-related research across the UNC system and its partner organizations.

September 3
1-2:30 pm

**Climate Change
Overview**

TBA

**Warming
Temperatures,
Extreme Heat and
Nighttime Warming**
